

EMBARGOED UNTIL TUESDAY, OCTOBER 21, 2025, 09:00 EST

SODAX Launches Intent-Based Cross-Chain Swaps, Undercutting Competitors by Over 1% on Execution Costs

Platform leverages eight years of Layer 1 infrastructure expertise to deliver protocol-owned liquidity model across 13+ blockchains—addressing liquidity fragmentation with transparent 0.1% fees.

ZUG, SWITZERLAND – October 21, 2025 — SODAX today launched cross-chain swaps to the public on sodax.com, introducing intent-based liquidity routing that enables users to trade assets across over a dozen blockchains—including Solana, Sui, Ethereum, and Base—in 20-30 seconds at a fixed 0.1% fee.

Internal testing against leading aggregator deBridge showed that a \$3,800 ETH swap from Arbitrum to Solana saved users about \$50, or 1.32%, in execution costs.

“We’re finally seeing independent blockchains form a unified network where interoperability is no longer a buzzword but an expectation,” said Min Kim, Founder of SODAX. “Eight years ago, we saw this future coming—and today we’re helping to make it usable.”

Protocol-Owned Liquidity Meets Intent-Based Routing

Unlike traditional aggregators that rely on third-party liquidity, SODAX maintains its own deep reserves across supported chains, executing trades directly through its Solver engine. The Solver identifies optimal swap routes across leading DEXs, handling all bridging and cross-chain messaging in a single, MEV-protected transaction.

“Our solver executes with just 0.1% output variance,” said Alexandre Chirouze, Development Lead at SODAX. “Users don’t have to think about slippage—it’s simpler, faster, and cheaper.”

This architecture enables SODAX to deliver predictable, low-cost execution even under volatile market conditions, addressing one of DeFi’s longest-standing pain points: fragmented liquidity across different networks.

Proven Technology, Now Available to Everyone

The launch, making the technology directly available to users, builds on real-world integrations with [Balanced DeFi](#), [Amped Finance](#), and [Hana Wallet](#), where SODAX's SDK powers instant swaps for non-custodial users.

“Since switching to SODAX, swaps have been lightning fast and smooth,” said David Winkels, Head of Product at Hana Wallet. “Users can trade across any supported chain in under 30 seconds, without bridges or wrapped tokens.”

Following Hana Wallet's integration of the SODAX SDK, the platform saw weekly top-up volume surge nearly ninefold, peaking at over \$4,000 within weeks, he said.

SODAX's SDK enables wallets, DEXs, and DeFi apps to integrate cross-chain swaps in weeks rather than months, offering developers a unified solution to liquidity management without custom infrastructure.

Eight Years in the Making

Originally founded as ICON in 2017, SODAX draws from nearly a decade of experience in cross-chain technology. Its evolution from a Layer 1 blockchain to a protocol-first DeFi platform allows the team to focus entirely on optimizing liquidity, execution, and developer experience.

“Our focus now is perfecting the unified liquidity layer,” Kim added. “We’re not competing with blockchains—we’re helping connect them.”

About SODAX

SODAX is a cross-chain DeFi protocol enabling swaps, lending, and borrowing across 13+ blockchains through Protocol-Owned Liquidity and intent-based execution.

The platform supports Arbitrum, Avalanche, Base, BNB Chain, ICON, Injective, LightLink, Optimism, Polygon, Sui, Solana, and Stellar, integrating with DEXs such as Uniswap, Cetus (Sui), Raydium (Solana), and Soroswap (Stellar).
