

# SODAX Descriptions

## Long-form

**SODAX** is a next-generation DeFi platform with a focus on application-layer utility. Built on the Sonic blockchain, SODAX offers a unified liquidity layer for cross-chain swaps, lending, and borrowing, powered by protocol-owned liquidity and intent-based execution. The platform currently supports 12+ chains, including Solana, Sui, Stellar, and a range of EVM-based networks.

SODAX provides access to its unified liquidity layer to partner protocols through its fully featured SDK's. Builders can now access the best rates from across supported chains, tapping into leading liquidity sources and routing through intent-based execution. SODAX SDK's shorten the timeframes to launch, or improve, cross-chain features – while benefitting from UX-first, chain agnostic design choices with both users and builders in mind.

## Short-form

**SODAX** is a cross-chain DeFi platform built on Sonic, enabling seamless swaps, lending, and borrowing across 12+ blockchains — all powered by protocol-owned liquidity and intent-based execution. SODAX focuses on unified, chain-agnostic UX for DeFi across ecosystems like **Solana, Sui, Stellar**, and a range of **EVM**-based networks. SODAX turns fragmented DeFi into a single, scalable experience.

## One-liner

SODAX is a next-generation DeFi platform, delivering unified cross-chain liquidity and real utility for the future of multichain finance.
